H-Tool Set

acc. to Dr. Hildebrand

The new H-Tools developed acc. to Dr. Hildebrand are a continuation of the successful X-Tool concept. The instrument tips are very flat and sharp pointed. The instruments are inserted along the root axis and the alveolar cavity is widened by advancing the H-Tool apically along the root of the tooth to be extracted with gentle hammer blows.

The light ferrozell hammer with a diameter of 35 mm enables work to be carried out safely. Thanks to the extremely light construction, this hammer produces a far less unpleasant feeling in the patient than using a hammer with hard plastic inserts or in the worst case with a metal head.
